

Security Architecture-as-a-Service

The Security Architecture team at Abacode provides services to help customers realize company security goals and objectives through frictionless engagements, where top tier Security Engineers and Architects integrate with your existing IT teams and deliver technologies in a timely manner that would otherwise require substantial investment of time and resources. We lend our years of experience to you to install and configure new technology required to close gaps, remediate vulnerabilities, and validate configurations of existing infrastructure are to best practice or any number of compliance frameworks.

Abacode's Security Architecture-as-a-Service includes **assessment, implementation** and continuous **management** of the following services:

Data Governance and DLP Program

Add trust and understanding to your organization's data through best practices, and procedures that protect the confidentiality and integrity of your company's data.

Identity and Access Management Program

Business processes and supporting technologies that enable the creation, maintenance, and use of a digital identity. Giving the right user the right access to the right resource for the right reason and maintaining a record of who has access to what.

Security Posture Assessment Program

Security posture program helps enterprises assess and improve their security postures by identifying and managing the value of their data, defining the threat exposure and cyber-risks of their data, evaluating if they have appropriate, reliable and efficient security measures in place, and recommending a concrete action plan -- i.e., a cybersecurity roadmap -- to help companies better control their risk exposures and strengthen their cybersecurity defenses.

Vulnerability Management Program

Vulnerability management is more than a stand-alone scan-and-patch function, more than just getting alerts whenever infrastructure requires a patch. Vulnerability management is about making informed decisions and properly prioritizing what vulnerabilities to mitigate and how. It's a holistic function that takes a proactive view of managing the daunting task of addressing identified vulnerabilities in deployed hardware devices and software.

Privileged Access Management Program

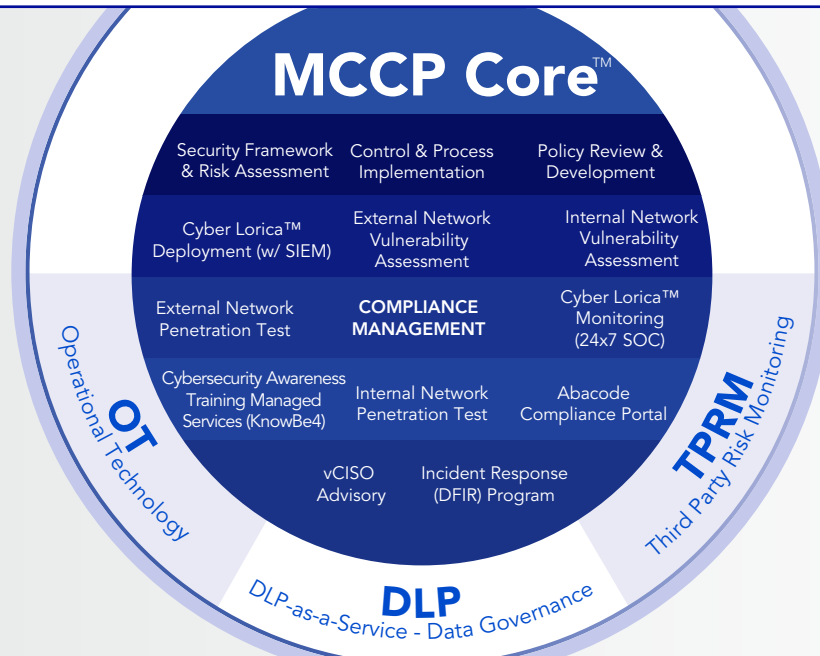

Privileged access management (PAM) consists of the cybersecurity strategies and technologies for exerting control over the elevated ("privileged") access and permissions for users, accounts, processes, and systems across an IT environment. By dialing in the appropriate level of privileged access controls, PAM helps organizations condense their organization's attack surface, and prevent, or at least mitigate, the damage arising from external attacks as well as from insider malfeasance or negligence.

CYBERSECURITY & COMPLIANCE IN ONE MANAGED SERVICE

MCCP is a holistic “stack” of cybersecurity & compliance services combined into one efficient managed program. Clients, partners, supply-chain, and regulators are increasingly demanding that organizations prove a degree of cybersecurity maturity tied to compliance with regulatory and best-practices frameworks.

This is driving a growing interrelationship between cybersecurity & compliance. By combining these into a single managed service, customers realize substantial cost savings and reduced operational and organizational complexity.

TESTIMONIALS

Abacode was the first company that could not only advise our team on the right strategy but also implement and run an entire outsourced Cybersecurity and Compliance program for us.

Jim Miller, CIO

"Partnering with Abacode allows us to utilize the expertise of its staff to properly implement a managed cybersecurity program, helping to protect the Tampa Bay Lightning, Tampa Bay Storm, and AMALIE Arena against threats without the overhead of additional staff and resources focused solely in these areas. We are pleased to have Abacode as a partner."

– VP of Innovation and Technology Services

TAMPA BAY LIGHTNING

"We rely on partners to help drive the Tech Data brand and services practice forward, and Abacode is one of those companies we've been incredibly excited to collaborate with. Abacode's people and process are second to none. They bring a level of quality and depth of services that are truly hard to find. Tech Data and Abacode, combined, are hard to beat."
